

## Time Before Treatment (~20 min)

## Treatment Preparation (~10-20 min)

## PT Exercise Period (40 min)

## Remaining EMF Delivery (20 min)

## Post Treatment (~2 min)

### Routine Treatment Session

- 1- The app previously tracked the times the patient conducted treatment sessions during his first week using the device and timed his treatment reminders according to these habits.
- 2- The caretaker removes the device-wearable from its travel case, plugs the disconnected wire into both the wearable and a wall-outlet, and dresses the patient into the wearable.
- 3- The caretaker connects the wearable to tablet via Bluetooth.
- 4- Depending on the device the app is being used on, security login may consist of a passcode, password, face recognition, or fingerprint recognition technology.
- 5- Distance sensors on the headset, neck, and back components of the wearable confirm that the device is an acceptable distance from the patient for delivered frequencies to be effective.
- 6- Following PT exercises, the patient is notified of any responses (both comments and validated) to their forum activity and any buddy/mentorship/DM incoming message.
- 7- The patient spends his earned gamification-currency to award a reply to a forum post/comment that especially resonated with him.
- 8- After the patient is done with exploring the Ecosystem features, he then asks the BrainQ app and gives his instructions while frequency delivery still occurs.
- 9- The patient is awarded currency for conducting follow-up (prior call as well as a boosted amount of currency for taking part in "buddy" treatment, keeping his streak of scheduled treatment sessions, and engaging in Ecosystem activity following treatment).
